Summary

The Association of Environmental Law Lecturers in Middle East and North African Universities (ASSELLMU), and Sorbonne University Abu Dhabi (SUAD) warmly welcome you to the 7th MENA Environmental Law and Policy Scholars Conference.

The Conference is supported by the United Nations Environment Programme; Environment Agency Abu Dhabi (EAD), ICELIS Global, and the UNESCO Chair on Environmental Law at Hamad bin Khalifa University, Doha, Qatar.

This conference builds upon the achievements from the first six conferences held in Doha (Qatar) in 2018, Settat (Morocco) in 2019, Doha (Qatar) in 2021, Amman (Jordan) in 2023 Sohar (Oman) in 2024, and Riyadh (Saudi Arabia) in 2025.

This year's conference will bring together educators, university instructors, trainers, and practitioners with expertise in environmental law and policy, as well as computer and data science, to exchange knowledge and share experiences. The goal is to foster learning and collaboration in strengthening environmental law education and practice in the region, with a particular focus on the role of innovative technologies and digital tools, including artificial intelligence, in advancing sustainable development across the MENA region. A key focus will be placed on the concept of the "twin transition," which explores the possibility of addressing the ecological crisis while simultaneously advancing the spread of digital infrastructures across society.

In acknowledgment of the importance of innovative technologies to the teaching and practice of environmental law in the MENA region, the plenary session and workshops will provide an opportunity for sharing information and best practices.

In addition to the focused pre-conference roundtables, the conference will cover national, regional and international law aspects of five main substantive topics:

- **Teaching and Practicing Environmental Law in the MENA Region in the Face of the Digital Transition:** How and whether digital tools, technologies, and online platforms are reshaping the way environmental law is being taught, learned, crafted and implemented.
- **The Potential of Digital Technologies to Enhance the Integration of Environmental Considerations into Business Practices:** Whether and how digital technologies contribute to businesses' environmental stewardship across a broad range of sectors, including agriculture, industry and finance.
- **Legal Pathways to Harness the Power of Digital Technology for Sustainability:** Whether and how the law contributes to steering digital technology's development in ways that promote sustainability.
- **The Regulation of Emerging Technological Risks:** Definition and regulation of technological risks related to the growing digitalisation of environmental policies.
- **The Legal Status and Regime of Environmental Data:** Conflicting narratives over the legal status and regime of environmental data.
